Subject: Support for efforts at the NEW EPA

Mr Pruitt, (Mr. Jackson),

As a lifelong 'consumer' of EPA regulations in the Power, Steel, Mining, Oil and Coal industries, I have always agreed with the premise that a watchdog is a good thing when profit is involved. However, I do not agree that it takes \$8 billion and 15,000 people to provide an effective watchdog function.

Please consider me as a possible addition to the new organization. I have a few accomplishments that reflect how I can benefit process improvement efforts at EPA. I have:

- Implemented an ISO 9000 analytical quality program for Radiological, Environmental, Process and Fuel at a 1,100 MW nuclear power plant by the age of 27. Our plant achieved perfect scores on intra-lab NRC checks
- Managed cost cutting effort for BP - Azerbaijan that uncovered and eliminated \$2.5 million in employee theft.
- Lead the review of all oilfield contracts for BP - Angola for risk and supplier manageability after the Gulf Spill. My team's contractors made the first reservoir penetration for BP after the spill.
- Managed a \$150 million/year offshore waste disposal program for Chevron - Angola resulting in a viable compliance solution while deferring three years of expense.

Clearly, I love working on challenging environmental process improvements. I would be proud to support you in any initiatives you may take on to make the EPA more effective.

Best Wishes,

Jim Kutney - BS Chemistry, MBA
